                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 62, Application US/09724864
Patent No. 6380362
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
James D
APPLICANT: Watson, James D
APPLICANT: Murison, James G.
TITLE OF INVENTION: Polynucleotides, polypeptides expressed
TITLE OF INVENTION: by the polynucleotides and methods for their use.
                                                                                                                                                                                                                                                                                                                                                                                                         DB 4; Length 456;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 17,

Interitual relates to a subscontrainty pullibron incoming in related.

The interitual relates to a subscontrainty pullibron and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function discribing activity. The epithelial or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, cedema, diabetto retinopathy asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modularing proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is a fusion protein encoding 6 manno acide from mouse nectin-3 protein and the rest form human nectin-3 beta protein. Human nectin-3 protein allocated on chromosome 3.

WPI; 2002-426103/45. N-PSDB; AAD37445. Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,

Claim 1; Page 98-99; 141pp; English.

sepsis, stroke

The invention relates to a substantially purified nectinialpha, beta, gamma and nectin-4 polypeptides and their corresponding polymucleotides. Gamma and nectin-4 polypeptides and their corresponding polymucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial cor endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or migration activity, viral polypeptide binding activity. The epithelial or migration distributed method is inflammation, sepsis, cedema, diabetic retinopathy, astendial barrier function disorder which is treated by the above mentioned method is inflammation, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for not inflammatory bowel disease. Nectin DNA is also useful for proliferation or angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenesis, ischaemia-repertusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothalial cell, an epithelial cell or a smooth muscle cell). The present sequence is human nectin-Jabeta protein.

The inversion contracts to a subcanniant purified medical solutions of gamma and nectin-4 polypeptides and their corresponding polynucleotides.

Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial corrections activity, epithelial partier function disorder which is treated by the above motherial barrier function disorder which is treated by the above mentioned method is inflammation, soems, odema, diabetic retinopathy, astraction of inflammation, soems, odema, diabetic retinopathy, astraction of inflammation, some manness in cancer cells, astraction or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as inschaemia, atheroselerosis, is chaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection.

Nectin is also useful for modulating proliferation or migration of an smooth muscle cell). The present sequence is human nectin-labeta protein containing 6 amino acids deleted from the N-terminal end. Human nectin-labeta protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

The invention relates to a substantially purified nectin3alpha, beta, command and nectin-4 polypeptides and their corresponding polynucleotides. Command and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherns function formation activity, epithelial corresponding nativity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, asthma, allergy, allograft rejection, metastasis of cancer cells, the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, condition of a tissue or a subject, such as including angiogenesis, tumour growth and treating herpesvirus infection. Stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a murine nectin-3 polypeptide. Nectin-3 is an immunoglobulin-like cell adhesion molecule that shows homophilic and heterophilic cell-cell adhesion activities. Nectin-3 polypeptides and polynucleotides are useful for investigating the mechanisms of cell adhesion, infiltration and metastasis of cancer cells, the diagnosis of malignancies of various cancers, and the development of methods for the

Gamma and nectin-4 polypeptides and their corresponding polymuclectides.

Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial corresponding but the endothelial proliferation or endothelial barrier function activity. The endothelial proliferation or endothelial barrier function disorder which is treated by the above cendothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, ocdema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, asthma, allergy, allograft rejection, metastasis of cancer cells, correct in transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, setroke, restenosis, isohaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection.

Shotin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-3gamma protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The invention relates to a substantially purified nectinialpha, beta, gamma and nectin-4 polypeptides and their corresponding polymucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or endothelial barrier function activity, endothelial proliferation or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration.
Mouse; nectin-1gamma; therapy; cell adhesion; cell proliferation; sepsis; paracellular transport disorder; kidney; diabetic retinopathy; allergy; allograft rejection; metastasis; restenosis; inflammatory bowel disease; oedema; atherosclerosis; ischaemia-reperfusion injury; thrombosis; stroke; tumour; cancer; herpesvirus infection; asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proliferation or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is mouse nectin-3gamma protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MARTPGPSPLCPGGGKAQLSSASLLGAGLLLQPPTPPPLLLLLFPLLLFSRLCGALAGPI 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel purified nectin-3 and nectin-4 polypeptides which bind tuseful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a murine nectin-3 polypeptide. Nectin-3 is an immunoglobulin-like cell adhesion molecule that shows homophilic and heterophilic cell-cell adhesion activities. Nectin-3 polypeptides and polynucleotides are useful for investigating the mechanisms of cell adhesion, infiltration and metastasis of cancer cells, the diagnosis of malignancies of various cancers, and the development of methods for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

The invention relates to a substantially purified nectin3alpha, beta, gamma and nectin-4 polypeptides and their corresponding polynucleotides. Gamma and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adensely ilunction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthery, allograft rejection, meteateasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, condition of a tissue or a subject, such as ischaemia, atherosalarosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour giveth and treating herpeaviers infection.
                                                                                                                                                                                                                                                                                                                                                                                    Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is a fusion protein containing human nectin-3beta protein fused to immunoglobulin IgG1 Fc region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAE23290 standard; protein; 387

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a substantially purified nectinialpha, beta, gamma and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VLFKNYSLNDATITLHNIGFSDSGKYICKAVTFPLGNAQSSTTVTVLVEFTVSLIKGFDS 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpervius infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-3beta-
 atherosclerosis; ischaemia-reperfusion injury; thrombosis; tumour; cancer; herpesvirus infection; fusion protein; asthma.

```
migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above endothelial barrier function disorder which is treated by the above actimal and a stime allery, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as ischeroscierosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is a fusion protein containing mouse nectin-3 protein and human nectin-3alpha protein. Human nectin-3alpha gene is located on chromosome 3. (Updated on 29-AUG-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      10;

recult pun and protein are useful for treating a disease associated with recult pun and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial created by viral polypeptide binding activity. The epithelial created by a disease associated or migration activity, wiral polypeptide binding activity. The above methoned method is inflammation, sepsis, cedema, diabetic retinopathy, astering, allograft rejection, mecastasis of cancer cells, paracallular transport disorders end as magnasis of cancer cells, paracallular transport disorders disease. Nectin DNA is also useful for the kidney or inflammatory bowel disease. Nectin DNA is also useful for thibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenesis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular sequence is human nectin-3alpha DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a substantially purified nectin3alpha, beta, gamma and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page 89-91; 141pp; English.

The invention relates to a novel method for identifying a candidate p53 pathway modulating agent. The method comprises providing an assay system having a purified IG polypeptide or nucleic acid, or their functionally active fragment or derivative. The method is useful for identifying modulators of the p53 pathway, particularly for identifying agents for treating disorders (e.g. breast cancer, colon cancer, kidney cancer, lung cancer or cancer of the ovary) associated with defective p53 function.

The identified modulators are useful as targets for novel therapputics. The method is also useful for diagnosing disorders associated with defective p53 function. The IG proteins or nucleic acids are useful as modifiers of the p53 pathway, and as therapeutic targets for disorders associated with defective p53 function. This sequence represents a human protein relating to the human IG genes used in the assay for identifying modulators of the p53 pathway of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying a candidate p53 pathway modulators that are useful as targets for therapeutics or for diagnosing cancers associated with defective p53 function, by providing an assay system having a purified IG polypeptide

Diagnosing prostatic cancer of the requences in prostatic tissue. Screening for inhibitors of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, so bort-interfering RNA or riboxymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an aptamer against the polypeptide; a (monoclonal) antibody (Ab) against the aptamer against the polypeptide; and antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjected at risk, were incubated sequentially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish percond antibody; streptavidin-conjugated horseradish percond antibody; streptavidin-conjugated horseradish eamined samples were counterstained with hemalum (blue). Malignant cells stained

New nucleic acids, and encoded proteins, from prostatic cancer tissue, useful for diagnosis, treatment and in screening for specific binding

This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer. Or the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection consubstances involves a binding assay, any compounds that bind are substances involves a binding assay, any compounds that bind are predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, continerferming RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an aptamer against the polypeptide; a (monoclonal) antibody (Ab) against the polypeptide; an anti-idictype, non-human conjugated by the polypeptide against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polymucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated compostatic cancer patients, or subjects at risk, were incubated compostatic samples were counterstained with hemalum (blue). Malignant cells stained second antibody, streptavidin-conjugated horseradish concerning a second antibody; streptavidin-conjugated horseradish concerning adenocarcinoma, membrane and cytoplasmic staining was very strong, and polymetide sequences used in the method of the publicance in the paterses of the paterses of the paterses of the paterses of the paterses. invention
